

# Security Implementation Services

**How secure are your critical business processes and vital information from unauthorized intrusion? Can you trust your customer data resident in your systems? Do you have the right controls in place to thwart attacks on your systems and data from rogue outsiders or disgruntled employees?**

Security Risk Solutions' Security Implementation Services provide the building blocks to deploy secure and protected Internet-enabled business applications. Employing state-of-the-art technology, experienced security professionals, and our intellectual capital, SRS' security expert teams provide you with the ability to leverage industry best practices and gain competitive advantage in deploying secure applications in the emerging electronic economy.

SRS' Security Implementation Services are designed to facilitate the implementation of intranet, extranet, business-to-business (B2B), employee-self-service (ESS) and business-to-consumer (B2C) solutions. We provide you with the demonstrated experience, flexibility, and technical capability needed to meet your business imperatives. Each of our Security Implementation Services is part of a set of proven Information Security building blocks. Individually, they address a specific need – together, they help you implement and achieve your business and IT strategy. These building blocks reflect the core technological competencies needed in integrating secure information and communication technology infrastructures, applications, or services.

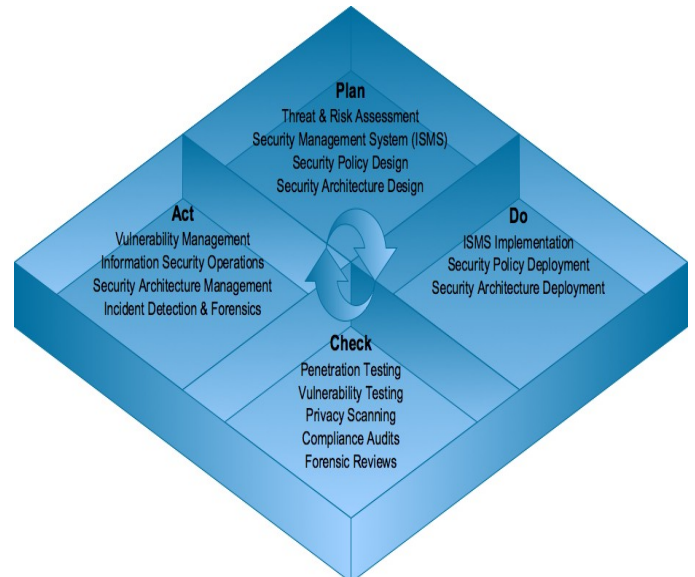

## Benefits to You

**Leading Edge Technologies** – We can review, test, prototype, and deploy the latest technology products and solutions to help ensure our clients have the widest possible range of candidate technologies to choose from in implementing their needs.

**Demonstrated Experience** – We are armed with the latest in technology, process and procedures, gleaned from hands-on testing and real-world experience in implementing advanced designs of key emerging technologies. Our team of experienced security professionals stand ready to solve today's complex problems.

**Knowledge Management** – We leverage knowledge from our prior engagements into our toolkits, techniques, knowledge management repositories and methodologies to facilitate and enhance knowledge transfer.

**Compliance View** – We have been serving in all ongoing compliance audits such as Sarbanes Oxley, Privacy Acts, Payment Card Industry security standards, ISO27000 reviews and can therefore design and implement your security solutions to meet these from day one.

## Solution Set Description

- Our Security Architecture Centre in Nairobi (under formation) performs a vital function in the hierarchy of our security services
- Offers vigorous testing, security design modeling, and product evaluations
- Architecture activities are aligned with the other SRS solution sets and focused on the following core technology areas:
  - Identity and Access Management (IAM)
  - Security Information Management (SIM)
  - Network Security

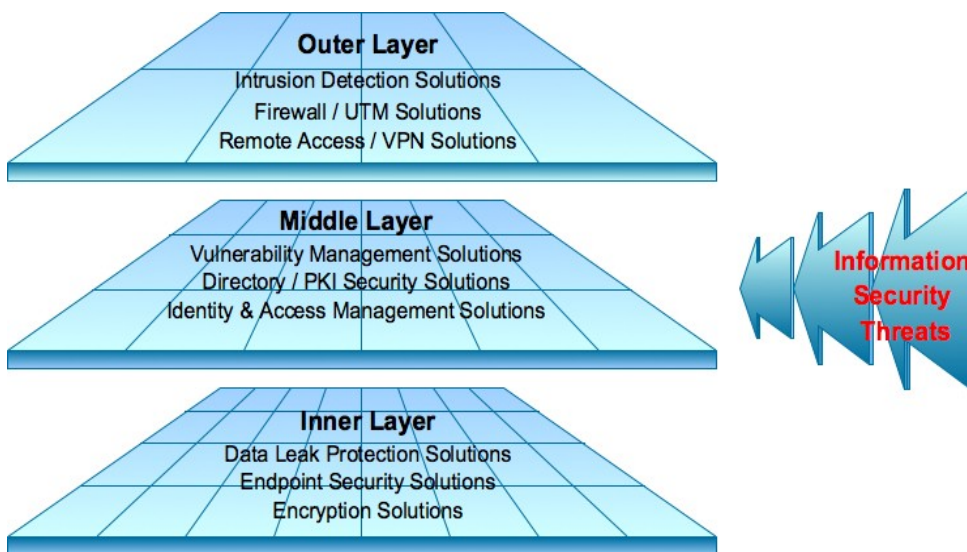

## Drivers

- Security-related solution that is not satisfying requirements and/or expectations
- Necessity of an independent, objective subject matter specialist security review
- Significant security breach necessitates assistance evaluating current security architecture
- Vulnerability assessment uncovers vulnerabilities that require architecture assessment and re-design
- Requirements dictate unique customization and non-standard configuration of products and technologies

## Value

- Accelerate architecture design and decision-making processes.
- Increase design security.
- Reduce security issues found during implementation, deployment, and operations.
- Increase design performance confidence, addressing and satisfying functional, security, and business requirements.

## Our Approach

## Security Implementation

This service constitutes a highly evolved and structured approach, compliant with the latest infosec standards, to designing a realistic information security system. The focus of this service is on identifying the right solution for meeting business or regulatory demands and implementing it to agreed timelines and budgets.
